Rishabh Goyal

(551)-349-1261 | gorishabh01@gmail.com | rgoyal5 | New York City

Summary

AI Engineer specializing in production LLM platforms, agentic AI systems, and AI-powered document intelligence solutions. Designs and scales AI systems that transform high-variance, unstructured data into reliable, structured outputs. Designed multi-provider LLM infrastructure and multi-agent systems with strong focus on evaluation, reliability, and cost optimization in production AI systems.

Technical Skills

- **Languages:** Python, Java, JavaScript
- **LLM & GenAI Systems:** LLM orchestration, Agentic AI systems (LangChain, LangGraph, PydanticAI, AgentCore, AWS Strands), Multi-agent workflows, MCP (Model Context Protocol), RAG pipelines, Structured extraction, Prompt engineering, Confidence scoring, Evaluation frameworks
- **Platforms:** AWS Bedrock, OpenAI, Anthropic, AWS Lambda, SageMaker, EC2, S3, SQS, CloudWatch, CI/CD, Docker, OpenShift
- **Distributed Systems:** Async processing, Fault tolerance, Caching, Rate limiting, Observability, Microservices
- **Data:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Vector databases, Kafka, Kubernetes, Elasticsearch
- **Certifications:** AWS Certified Machine Learning Engineer – Associate

Professional Experience

- **ACORD SOLUTIONS GROUP** *May 2023 - Present*
  AI Engineer Little Falls, NJ
  - Designed and developed an intent-driven agentic AI system for ACORD standards, engineering the core reasoning logic, tool execution, and foundational RAG retrieval pipelines. Designed the supporting streaming APIs and leveraged AWS Bedrock AgentCore to orchestrate short-term conversational context and long-term memory persistence.
  - Externalized ACORD's core knowledge bases into reusable MCP tools, enabling any team across the organization to plug standardized retrieval directly into their own agentic stacks through a standard protocol.
  - Led the architectural migration from a 4-year-old legacy framework to a multi-provider LLM inference service routing 100% of organizational non-agentic AI traffic. Hardened reliability with PydanticAI for type-safe workflows, custom circuit breakers, prompt caching, guardrails, Tenacity-based retry logic, and dynamic rate limiting.
  - Achieved a 20% reduction in AI infrastructure costs through prompt caching, and moving eligible smaller workloads to cheaper model.
  - Designed and developed AI-powered document intelligence pipelines processing ∼30,000 pages daily with 94% accuracy, integrating OpenCV computer vision techniques for advanced form analysis to directly reduce OCR-related costs by 20%.
  - Developed comprehensive validation infrastructure including automated test frameworks and established evaluation systems, for continuous quality monitoring and automated flagging of output degradation.
- **Amdocs** *Feb 2022 - Aug 2022*
  Software Developer Gurugram, India
  - Built the React/Redux frontend for a large-scale 5G Real-Time Billing platform at ATT, developing reusable components and state management for the application's user-facing modules.
  - Built and tested Java backend microservices for batch and streaming file processing using Kafka, supporting automated deployments via Jenkins and OpenShift.
- **Capgemini** *Oct 2020 - Jan 2022*
  Software Engineer Hyderabad, India
  - Built and scaled production conversational AI systems for Bayer across Europe, South Asia, and North America — 20K+ monthly users across 5 chatbots, including the user-facing chat interfaces alongside the backend services
  - Led integration of the conversational platform with 6 enterprise systems (Azure, SharePoint, SuccessFactors), implementing custom data transformers for seamless communication.
  - Recognized as Star Performer (2021) for driving end-to-end delivery of high-quality solutions.

Education

- **Stevens Institute of Technology** *2023*
  Master of Science in Computer Science (GPA 3.7) Hoboken, NJ
- **Uttar Pradesh Technical University** *2020*
  Bachelor of Technology in Computer Science India
